

PROFESSIONAL SUMMARY

- **Problem:** Enterprises often struggle with fragmented systems for management, sales, and financial reconciliation, leading to operational inefficiencies and data inconsistencies.
- **Solution:** I architect high-performance, unified platforms using React and NestJS Microservices. I expertly integrate complex business logic with external ecosystems while orchestrating automated deployment workflows to ensure seamless data flows.
- **Impact:** Delivering robust, enterprise-grade solutions that streamline processing time and ensure rigorous legal/financial compliance. Proven track record in managing end-to-end project lifecycles (SDLC) and optimizing cloud infrastructure for maximum uptime.

SKILLS

- **Languages:** JavaScript, TypeScript, C#, C++, Python.
- **Frontend:** ReactJS (v19), Vite, Next.js, React Native, Expo, Tailwind CSS, Shadcn/ui, Ant Design, Zustand, React Query, TanStack Table.
- **Backend:** Node.js, NestJS, .NET, Socket.io, RabbitMQ, Swagger, Passport.js, TypeORM, Mongoose.
- **Databases:** PostgreSQL, MySQL, MSSQL, MongoDB, Firebase.
- **Cloud & DevOps:** Azure DevOps (CI/CD Pipelines), Azure Services (App Service, Blob Storage), VPS Management (GCP/Self-hosted), Docker, Nginx, DNS Management, SSL (Certbot/Let's Encrypt), MinIO.
- **Management & Tools:** Agile/Scrum, Software Development Life Cycle (SDLC), Git, Postman, Docker Desktop.

EXPERIENCE

- **Fullstack Developer | Freelancer**
- JAN 2023 – MAR 2024
- **Problem:** Clients required scalable, secure web applications to handle complex workflows (financial reconciliation, multi-tenant management) that legacy systems could not support.
- **Opportunity:** Architected and developed a high-performance Admin Dashboard and robust Backend infrastructure using ReactJS and NestJS to centralize operations.
- **Success:** Successfully deployed critical systems handling financial integrations and legal workflows (e-contract/e-invoice). Optimized infrastructure by configuring VPS (GCP), managing DNS, and implementing Nginx Reverse Proxy for enhanced security and load balancing.
- **AI Dynamix | Fullstack Developer**
- APR 2024 – OCT 2025
- **Problem:** Clients needed rapid development of custom e-commerce and media platforms with real-time capabilities to compete in a fast-paced market.
- **Opportunity:** Utilized Agile development with the MERN stack and Socket.io to deliver feature-rich MVPs and production-ready products.
- **Success:** Launched responsive e-commerce and streaming platforms. Automated the delivery process by setting up CI/CD pipelines (Azure DevOps/GitLab), reducing manual deployment errors and increasing release frequency.
- **Tập Đoàn Phong Thủy Đại Nam**
- NOV 2025 - JUL 2026
- **Problem:** Refactored the core product to integrate automated departmental scheduling and a task scoring module.
- **Opportunity:** Utilized Agile development with the MERN stack and Socket.io to deliver feature-rich MVPs and production-ready products.
- **Success:** Eliminated manual scheduling time, improved system stability, and enabled transparent productivity measurement.

PROJECTS

Panasonic PSV: Electronics Retail & Promotion Engine

- JAN 2025 – OCT 2025
- **Team module Leading:** Managed the full SDLC, bridging the gap between complex business logic and technical execution for Panasonic's retail ecosystem.
- **Key Modules Delivered:**
- **Inventory & Supply Chain:** Engineered a high-precision tracking system using Tracer technology for real-time stock movements across distributed warehouse networks.
- **Versatile Promotion Engine:** Architected a dynamic reporting and reward system for various marketing campaigns, allowing automated Reward Redemption and real-time performance analytics.
- **After-Sales & Warranty:** Developed an E-warranty system to digitize the entire lifecycle from product activation to agent commission settlement.
- **Infrastructure & DevOps:**
- Deployed and managed the system on Azure Cloud Services, configuring CI/CD Pipelines (Azure DevOps), Nginx, and SSL/DNS to ensure secure and stable operations.
- **Tech Stacks:**
- ReactJS, Vite, Shadcn/ui, NestJS, Azure DevOps, Azure Blob Storage, Docker, GitHub, QR-Scanner.

GotrackID: Hospital Asset Management System (HAMS)

- Jan 2025 – Apr 2025
- **fullstack Developer:** develop a medical-grade asset tracking platform, focusing on the seamless integration between software layers and IoT hardware to ensure 100% asset visibility.
- **Key Modules Delivered:**
- **RFID-Driven Asset Tracking:** Engineered a high-performance interface to synchronize with RFID Reading Systems. Developed algorithms for real-time identification, locating, and tracking of medical devices via RFID Tags, enabling instant "Find My Device" capabilities within hospital zones.
- **IoT Edge Integration:** Built a robust data processing layer to handle high-frequency signals from RFID antennas, converting raw tag data into actionable location history and Automated Proximity Alerts.
- **Medical Asset Lifecycle:** Designed a complex State Machine to manage devices from procurement to liquidation, with status transitions triggered automatically by RFID gate movements.
- **Inventory & Logistics Excellence:** Built a multi-warehouse system supporting Internal Stock Transfers and automated Import/Export workflows via batch RFID scanning, reducing manual check-in time by 95%.

XHEROZONE CRM: WEB ADMIN AND CRM

- NOV 2025 – JUL 2026
- **fullstack Developer:** Spearheaded the continuous improvement of the enterprise software by developing new features, refactoring architecture, and optimizing overall system performance.
- **Key Modules Delivered:**
- **Intelligent Workforce Scheduling:** Engineered an auto-assignment algorithm to dynamically distribute tasks within strict time constraints. Integrated advanced business logic to automatically align with corporate working hours and seamlessly bypass public holidays, ensuring zero scheduling conflicts.
- **Dynamic Performance Scoring:** Built a comprehensive scoring engine that evaluates employees based on actual task volume and turnaround time. Enabled real-time metric tracking and automated score updates to accurately reflect individual and departmental efficiency.
- **Automated Reporting & Approval Workflow:** Developed a centralized reporting system that aggregates task data to calculate overall productivity. Streamlined the managerial review process by automatically generating and archiving structured performance logs for multi-level approval.

EDUCATION

HCMC University of Technology and Education – HCMUTE

2019 - 2023

FUNiX (Training Center)

Feb 2024 - Aug 2024
